Part 1

(:11) K- Thank you very much. Good morning, good day to you, as usual, wherever and whenever you listen to this series of Knowledge Seekers from Keshe Foundation Spaceship Institute.

(:12) It was interesting to see the Intro, and it was interesting to see, how some nations have used this technology, and how some nations have no clue about this technology. We are getting to a point in the technology (T) in understanding the magnetic (M) fields, motion of magnetic fields, the collection of magnetic fields, what we call a plasma, in a different way. In the World of Creation, magnetic fields, radiation or any kind of what we call, Cosmic Rays (CR) and whatever, it's not there on his own. It's not just appears on his own. The world of science has not understood what we call nuclear radiation is. How is created? And we have a lot of fallacies, we have a lot of wrong information, especially in nuclear industry, especially in knowledge of present what we call, advanced technology in energy and nuclear. When I was appointed by British Nuclear Fuel to find out why some of the panels in the ?? Hinkley nuclear power stations are falling off the, what I call, the roof, and the walls, and the ceilings, and everything else, which they could not sort out. This became an enigma to British nuclear physicists around 1970s and 80s,

(:14) in how suddenly out of nowhere just these huge panels, stainless steel panels mainly, to absorb the radiation within the reactor, within the containment of the building, happens. In this was going from one desk to another, from one scientist to another in British Nuclear Fuel and it was one of these things that nobody could solve so it was to keep the youngsters, the professionals, what we call the "tea collectors," to find out and keep them busy for a year or two and then they are given another job. I was most probably number so and so down the line, scientists who joined and this was given to keep busy. What does this means? And then you understand what the teaching of today is. What actually was happening in ?? Hinkley nuclear reactors and British nuclear reactors was very interesting because, at the time of what I call, nuclear scientists of Britain. These things were rusting, or they were in a way, becoming a nuisance to the whole structure. Because a few panels has fallen off, it's hundreds of kilos, and what it was, literally you have a nuclear reactor, which is sitting in the center of a building,

(:16) which literally has what we call, nothing to do... What's the story and what was the story? And then you learn what it's got to do with our teachings of past few months. This was a nuclear reactor in the ground. This is the dome of the nuclear reactor housing where we walk like idiots over the reactors. And these panels are literally hooked in. And these are literally, if you look at it, were screwed into these concrete walls. And

every now and then, on a regular basis, some of these nuts were falling off. And then they get a vibration and within a short time the whole panel drops off. They brought mechanical, they brought every kind of physicist which was in IAEA of England and, what you call it, British Nuclear Fuel, ?? corrosion and everything else, was considered. There he comes a fresher boy (inexperienced), of the, back of the Queen Mary College, a nuclear student. And given this task, he will spend a couple of years trying to play with this. And then, as he's a nuclear guy, we make him a laughingstock. It took (me) 2 weeks to solve where the problem was.

(:18) I moved to the, what we call, a cow shed, with 200 top British scientists, in rows of 10, rows of 20, and I was given the first chair. Now, it spends couple of years this guy to do this, and the guy to get from here, to the top of the table, used to take 25 years, and then there were 20 or 10 of these, and then you become the top man in the room. And then you become one of the brilliant guys, and late ages of British Nuclear Fuel. There comes a young boy with understanding of the nuclear physics in a different way. Given the job, (expected to take) two years to do, (he does it in) two weeks. It was very easy. Had nothing to do with corrosion. It had nothing to do with materials, and nothing to do with anything else. It was very simple. Don't forget, this young boy already had battles in Queen Mary College with a nuclear reactor, confirming that the peak of the radiation is outside the

building, than inside the building, which led to closure of the Queen Mary nuclear reactor. So, when this radiation comes in to go out, somewhere hits the nuts. British Nuclear spent huge amount of money some... in changing some of these bolts and nuts, as they needed different alloys, they needed different things, the composition was different. But it wasn't that. What was actually is, it was proved, that our nuclear physicists are walking on "a time bomb," they are walking on the field of radiation, as we saw in the Intro video.

(:20) Instead of having a nuclear reactor, to absorb the radiations, or whatever, or gold from the material, these nuts were collecting the radiation. It changed in composition. Highly strengthened, toughened nut is no match to radiation. And as the radiation goes outside the building, it's touching the nuts. Stainless steel becomes putty. Submitting the report in two weeks to the head of the table and then to the "head" of the room. I came to my desk on the Monday of the third week and I was told, "My desk has been cleared, I have no room in this room." I looked up, I said, "Have I been sacked?" "No, you solved the problem, which for years we couldn't do. You're a nuclear physicist, we are all, everything else working for British Nuclear Fuel for a nuclear physicist." I was moved into a room with five type scientists from Oxford and others, in a little room, to be there, to become a bunch of elite nuclear physicists. Again in this room, another accident happened, "Three Mile

Island," if any of you knows about it, as I got here, British Nuclear Fuel was trying to sort out a way that Three Mile Island cannot happen, we cannot lose control room, so we designed a remote nuclear control room 10 kilometers from the power station. And that was our design. And then from there I was promoted to a single room, and then the two weeks later, to work directly with the head of British Nuclear Fuel, in designing new nuclear reactors.

(:22) In this process, we found out that, it's not the actual absorption, it's a change of composition. Radiation released the material without ever being there, it changed molecular structure of the bolts. Never considered, never understood. But now we understood. We called it 'nuclear radiation.' But you cannot tell your workers, hundreds of them, on different ships working over this reactor, guys you're all lined up for cancer. Most of British nuclear workers die of cancer, testicle cancer, prostate cancer. Why? What happened to that nut? It happens to their 'nut.' Wherever there is a nut, being a testicle, be it lymph's, be it anything else, it's the same radiation. Nuclear industry has not managed to safely to isolate nuclear reactors, even today. But comes out to one point, what is the radiation? How is it created? We have a lot of fallacies, we have a lot of things, because we have achieved some in the world of what I call,

(:24) Physics. In the world of understanding of material, where I first came to understand about radiation is that, when we heat something up, and in

heating it up, we hit another plate, in reaction we get X-rays. That was the first thing I've understood from radiation. You need the material, you need the target, and then you create a radiation by hitting it. Gamma rays, every other rays, nowadays it's considered more or less to be created, even when we talk about beta rays and gamma rays, not understood, we just say it's created. But what is the cause of the creation of radiation? X-ray, Alpha rays, Beta rays, and gamma rays, every other rays which we know we have called even Cosmic Rays, are not created the way man does on this planet. We see huge amount of X-rays detected coming from Space. Have you wondered how many mega ?? tetragons of energy God has put on targets to hit to radiate the whole Universe (U)? How does Gamma rays and Beta rays and everything other rays are created?

(:26) We call the Alpha rays, God knows, like particles of something look like and everything else. This is all nonsense. Literally, the world of the science of today has not understood the source of energy, what we call radiation. And some of these radiation in collection and interactions are called the viruses like the Corona we have. But this kind of viruses are created in a different composition of radiation, energy packages. The man's understanding of the nuclear radiation is as farfetched today as a reality which is created in the Universe. As much oil is created from the dinosaurs, it's true. As the radiation in the world of the Cosmic Rays, in the world of the Space technology, that the

man will come to understand. Nuclear radiation, as I said to my professors, and they told me, "You're a lunatic." I said, "Yes, because I'm a scientist lunatic, and you are fallacy lunatics." It's very simple. Now, how you understand the plasma? As I understood 50 years ago, it's a very simple thing. Nuclear radiation, Cosmic Rays, are created from interaction of magnetic fields. At a certain length, certain strength, (:28) these magnetic fields find a way to be so what I call, strong, but as a given strength that their interaction behaves like a ?? ray. But in fact even them are fields. What's the difference? I'll go back to what you understood more in the past few years of teaching. We always said the Sun radiates fields, the Earth radiates fields. We call these magnetical (M) and gravitational (G) on both sides. But Earth at the same time radiates nuclear radiation. This is part of it. We measure some of it. The same is from the Sun and the same comes in from different parts and directions towards the Earth. What happened in interaction of these fields as these are both dynamics, (I should have to put this one the other way around, that we don't get clockwise and anti-clockwise later on argument). This interaction of the fields in higher levels, in the higher orders of what I call, atmospheric conditions in different layers, according to their strengths, create different packages of energies, which with the interaction of the fields of the Earth and the Inertia of material, lead to the creation of Copper (Cu), Zinc and everything else that you imagine. (:30)

But you have to understand all these material interaction, all these plasmas which are created in the, between the fields of the Earth and the Sun are not absorbed by the Earth. They become, again, they are package of energy, we call it viruses or whatever and according to the Inertia, magnetic field the strength of the solar system, they become cosmic dust. This is how cosmic dust are created. Entering Inertia of the Earth, they change according to the package strength to the material. Rains gold, rains calcium, rains oxygen. But in the space because we don't have a central control, but we still have localized Inertia according to field strength, these things the way they converted on Earth to Zinc and Copper, they change to material. This is how cosmic dusts are created and world of science has never understood. This is the essence of the way we create material on Earth. The same way according to the Inertia of the matter state, here according to the Inertia of condition of the position, then asteroid and meteoroids in collection together, are created. But, not every fields lead to creation of plasma. Interaction of these fields, like as I always said, to grind like a grinder and a knife in your hand, and you get the sparks coming in when you've got the highest speed grinder going against your knife, (:32) all the lights are not the same, which comes in, all the sparks are not the same, all of them doesn't matter, does not end up with dust of iron on the floor even when we sharpen a knife in our bathroom, in our kitchens, in our homes, we sharpen anything, even

your scissors, you release certain amount of nuclear radiation, which means is the package of energy. But in the magnetic field in the Cosmos, the radiation comes from the interaction of the field of the Earth and the Sun. And this point of interaction, as it's not in a package of conversion to become a, what we call a field, and it's on its way to become a field, in a slowing down somewhere down the line, we call it radiation. So what does actually mean? We understood that the interaction of the field of the Earth and the Sun led to creation of the plasma packages which well with the interaction with the Inertia of the Earth became materials. Again, the interaction of the fields in a certain angle, in a certain strength, creates a ray, become the essence of the Cosmic Ray, cosmic radiation, x-rays, gamma rays, upper rays, and every other ray which man has not made a name for in the Universe.

(:34) As in their strength they do, they do not match, they do not bind, they do not in a way interact with what we call energy, Inertia of their strength. You find out the Inertia strength of the gamma ray, I change it into matter for you in one second. So, now you understood what was in that Intro 10 years ago. And that's how we capture. We capture nuclear radiation and convert it into matter within the structure. And this is how nuclear radiation in the Space becomes material. This is how in the world of science, radiations become matter. This is how many of you catch cancer, because you just live near, or pass by

one of these cold nuclear reactors. The same thing happens when you live near a refinery. The same thing happens when you live in a near any chemical plant. Because in production, in interaction, in processing, a certain amount of radiation which is unknown are released. We don't see radiation detectors in refineries. I always said to my workers, (:36) where is a nuclear detections over the materials in these buildings? We don't need a nuclear radiation detector in a refinery. I said, "Excuse me my language, bullshit." Why? Because in essence of the oil industry, which most of the people don't know, oil goes washing everything down to become in ?? a pot in the bottom. As I always say, "?? In the bottom", which you call it oil is everything in this pot. From Uranium to Plutonium, to CH₄, amino acid (AA) and everything. If you want to understand what the oil is go back to your systems you pay so much for called, filtering. You put your water in the filter and you have layer of different sands and coal and whatever, and you get a clean water. This is exactly what the oil industry of today is. The amino acid on the surface of the oceans wash down and they are lubricant, they take everything in a small parts with them. When they cannot go any further, becomes a oil well. Your water bottle, bucket, becomes oil well, what you call it, clear filtered water. And everything else is collected here. In this oil well is ?? not. And all the known nuclear materials in the world are in oils.

(:38) Does not matter how they refine. And in that process, once they are refined they get more agitated, more releasing and they carry certain amount of radiation. In Western Europe today if you buy a plot of land, if you buy a fuel station and you want to build or you want to do anything on that land you have to dig up to 12 meters down to collect all these which is over life of the petrol station every time you went and you tank, then a few drops fell on the ground, to collect the Uranium's. And this land, the soil is taken to be washed by the rivers, and we feed the Uranium and all the contamination back into the rivers, where they wash the sand or the soil. So, we feed it back into the system. If man starts understanding the process, and in a way, we use all the ships on the high seas. We use what we call, marine oil. Marine oil sold for a few cents. Marine oil in my hand worth billions. It's what we don't clean. Radiation in it is heavy.

(:40) Half of what they call global warming is due to radiation which is released by heavy oil burning. And it comes from interaction of the fields of its material as it's loosens up, it's a free plasma to release. Now you understand how mankind has got himself entangled in a false knowledge, in a false understanding, but where reality, it sits literally in our hand. We understand the story of the bolt and the nuts and panels in British Nuclear Reactor in Hinkley 1 and 2. Years later British Nuclear Fuel published a paper confirming the correctness of this discovery, but it became as part of British Nuclear Fuel. What does

this will do for us? What it has to do with our Space Technology? A lot. In the Space, technology if you are a man of UFO, or flying objects through Plasma Technology reactors, which is now everybody's after. And if you've seen the latest videos on the Internet, they all have two UFOs running and F-14 and F blah blah images following it, the fake pictures. But let's say if man manages to build these UFOs, which we know they have, we still go through fields where the field interaction creates a lot of Cosmic Rays, a lot of radiation.

(:42) If you were the captain of the spaceship how would you avoid it? If I was a captain I'd drive into it. Why? Because within the structure of my reactors these are food, these are energy packages which I convert to what I want. All Cosmic Rays are not dangerous, Cosmic Rays are essence of the Creation. Cosmic rays if you add it together or take it away from each other creates the material you like. Isn't this what your lymph's do? Isn't this what your glands do? Why do you take B12? Why do you take B9 and B6 and everything else, to replicate this job? Replicate the creation of the radiation and not material. As I always said, Eskimos have been eating one or two type of different foods, hardly any vegetation all their lives. And the man in Middle East had the olives, the lemons and meat and everything else. And the man in China something else. But, how come that you all create the same organs, the same muscle tissue, the same blood and everything else.

(:44) Because of your glands, because of your position of what you call, gland, but in fact is what is the process of plasmas, which they interact and according convert everything to what is needed in the body of the man. When you look at the gland, When you look at thyroid land, when you look at anything else, thalamus, or thymus, glands are plasma packages, which in the matter state have not solidified, but they stay in the combination of and the interaction of their plasmas lead to creation of the radiation. Which that radiation, in so many ways, without the man understanding later on has changed to the world to hormones, but in essence it's a radiation factory. So, now you understand, the creation of magnetic fields, interaction of magnetic fields, is the essence of the Creation of what you call in a, what we call, left-over radiation. So if you understood this, and if you understood the principle working of the body of the man. And in what we explained last time in magnetic fields coming out and magnetic fields going in while at the same time in the same space gap, if

(:46) I can get the right color. Magnetic fields are coming in as much as going out and you can control the operation of single pair of fields you dictate in a simple language.

<< Problems with the whiteboard. >> K- ... So we come back to this position of the plasma or you call it a magnet with the radiation fields, or you come with the same in the space gap... with a space gap in a

radiation field that you considered interaction of the two materials, or a beam hitting a target which you produce X-ray,

(:48) but in fact the nuclear radiation, nuclear material radiation is created out of interaction of the fields, sometimes of the same plasma, sometimes of another plasma interacting with the fields. This interaction of the fields of a plasma is the essence driving force in transmutation and transportation. How closely you allow the gravitational field to come close to magnetical field of the same plasma dictates what you release and radiation, which in essence become the Soul feeder of your Soul in transmutation and control. The speed of control, dictation by thoughts, dictation by emotion. In the present science, in the present understanding of the knowledge of the radiation, the world of man talks about radiation in a matter state. We talk about the radiation in an energy state. And in a coming time in much deeper teaching, I'll explain to you how you can control the field radiation between magnetical and gravitational that it leads to speed of travel beyond man's imagination. When you understand that, when the knowledge of man reaches to understand the interaction of the fields of a plasma then man can travel the span of Unicos.

(:50) Matter state energy plasma condition allows you to travel within the Universe. Once you understand the knowledge of Man, reaches the position to understand the interaction of the fields upon each other, of the same plasma. Amalgamating them together, in a way

of what I call, two rays going in the same direction, or interaction of the fields as one goes to the opposite direction, will lead to creation, to transportation and transmutation. Where the interaction here brings different condition than the interaction here. This is why in the teaching of couple of weeks ago, I explained, when man understands the work when he can separate one single field of a plasma, then man reaches the knowledge of the transmutation across Unicos. Man finds a way, the fastest way, the direct way to reach the Creator, to gather the Knowledge of the Creation. Initially it was one bolt on the dome of a nuclear reactor to show it changes the characteristics. So it changes the characteristics of the plasma itself. In a way, if I can explain to you in a much easier way, is that you can use the fields of the plasmas to feed, to create interaction within the plasma.

(:52) Creation absorption of the fields, which then this can release to the Soul of the Man (STM), to the physicality (P) of the Man. This is how your body works, this is how in the teachings of the past I explained that the physicality can be fed by the STM. This is the STM. Where in the physical condition we created glands and God knows lymph's for different strength, radiation to be absorbed, converting to become the matter state of the body of the man in the plasma condition, so does the Soul with the what we call the fields of the Universe. The conversion from higher order to a lower order that it can feed the Soul of Physicality (STP), and then the physicality of the

man, and then even that radiation, that field, needs to be absorbed by the glands to be again diluted, that it can be digested, that it can lead to the creation of the physicality of the man. But when it doesn't lead to radiation, what we call physicality, creation of physicality, as a field interaction, which has no dimension, but field ?? as ?? then connection, we call it emotion. And if you understand this, and go back on the teaching of past two or three years, where I start speaking about the emotion of the Soul and emotion of physicality because the feeding comes from the Soul, in the strength of the field creates the same dimension in what we call STP and in a non-dimensional condition of the no wiring of anything we call the brain of the man the emotion of the man, the emotion of the STM, and the emotion of the STP, and man can in a specific way be connected.

(:54) So what I ?? feel in my physical dimension, I feel in my soul dimension. And then if they are parallel, they are strengthened the same, then the soul decides, "You want the cancer, I give you a cancer in your prostate, you don't like the emotion of what your son creates for you. That's where I created it from." Now you understand. The process of the Creation does not come in a matter state. state, it comes on the fields, radiation, whatever the man would like to call. Conversion of the energies, conversion of the fields, conversion and interaction of the gravitational magnetical fields is the essence of the Creation. And as you never understood, I gave you this in your

MaGravs. The essence of, in a way, understanding of the totality is very simple. Your top layer MaGrav is your physicality, your bottom layer MaGrav is your Soul, and the center sits the STP. And if you would like to play a game? Where here you feed the energy the way you feed the plasma fed from ?? in. Now those of you who've been battling with MaGravs for such a long time. Let me give you a gift. Turn your MaGrav system upside down, and put your Soul in the right position.

(:56) Then you understand what I gave you as a creation of the fields of the Universe. You looked in the MaGravs for a few crumbs of energy. I gave you a MaGrav essence of the transmutation in dimension of the Creation and the Creator. My advice to you is, do not sit on your MaGravs upside down. And my advice to you is very simple. If you put your MaGrav the way you do now, you have to understand that the latter ring has given you Field low enough that it can be touched, it can be converted in a way digested, might become part of your physical dimension. This is why I always told you, you look at the MaGrav as a power supply, and look at MaGrav as a structure of the life in the Universe, in the Creation. As I look at the fields it creates, you look at this, what comes out, that you might have. We had a very interesting case, some of the leading scientists and influential men of the government, in past 72 hours, more or less, were confronted with this. That, "You were given such a power, such a technology". Do you know what the guy

said? "Just give me a little fire that I'm interested. I'm not interested in the rest to take man any further."
(:58) Just... just, I can have the energy. I don't... I don't want to understand the rest. What do you do when the leaders of our nation are such a idiot and ignorant people? Now you understand. How and why we gave you the MaGravs. Because the whole essence of it was, in a way, this. Now you understand what a patient man I am. Eight years I've been sitting and watching you lot playing with MaGravs and the only man who came near to understand it was Jon Bliven. We set a MaGrav set in a specific way with Jon and he stood on it and he said, "I'm off the floor, I'm not, I don't feel a floor." You remember how many MaGravs he had? We made a combination and through our system in Austria, I tuned, connected in a way that he said, Mehran, I'm not on the ground, I don't stand on the platform.

(1:00) If you understood this, do you think you need a propulsion and jet engines, when with the right combination of the fields, radiation from your even MaGravs you can levitate. We have MaGrav systems that we see with the railways using matter state of magnets interaction fields. What happen if he used a plasma interaction field? Now you understand the change in technology. In the next few days, in the next few weeks, you will see the emergence of the Keshe Foundation and with what President Trump has set up, evolution of the science transformation into the United States by Keshe Foundation. We open the

science for the world, through our channels in US and other parts, to be brought into public. We change the course by releasing technology like this in a way that many of you have already known we set the fields for it years ago. The new technology of the MaGravs, the new technology of the creation of the magnetic fields will be in essence released to public. Would you like to take the screen please? And in that way, in that manner... Rick yes, thank you very much. In that way we understand the interaction of the fields. Even if you look at the picture which is on the screen. You have the Sun on the right side the reactor. (1:02) You have the Earth on the other side. Somewhere in between when we run these, we create radiation, Cosmic Rays. We create dimension (D) of Creation, we create dimension of the fields interaction. You remember when in this exhibition we run one system what happened to the speakers? If you remember the incident and it's somewhere in the teachings. Why did we touch the speakers? Because how does a speaker work? There's a little magnet which vibrates and the plasmatic field of the system interacts with that magnetic field, which between the magnet and the plate, which is vibrating against, again is a plasma fields, there is no matter state fields. Between the two there is a gap, there is a dimension, where in that gap, between the plates and the, what we call, the system, We or the fields of what we call plasma, from running of those UBESUS in the back, has interfered with. In a

way there is no difference between the what we spoke...

(1:04) (Systems are getting more and more complicated). If you look at it in the dome of the nuclear reactor. In the .. dome of the nuclear reactor, in Hinkley, we got the radiation from the reactors, untying the nuts. In running the UBESUS, creating plasmatic fields and the speaker with a magnet, we interacted between the fields between the magnet and the body. Now you understand in

knowledge there is no difference. Here nuclear radiation interacts with the matter. Here radiation created by the matter interacts with the fields. This is where we have to understand the totality of the knowledge, the totality of understanding the reality about the knowledge, about the science. And in so many ways, I can move your soul the directly into this field and pick you up here as a human between the two. Once you travel in the dimension of the, what I call, the STM,

(1:06) transmutation. Now we understand the truth behind the Science of Creation and how Cosmic Rays, cosmic radiations and materials in our Universe and galaxies are created. Does not come with a fallacy, that when a meteorite hit the Earth, the dust went and it became part of the Cosmic Rays, or cosmic dust, or the Moon was created when the Earth was hit. Now we understand, how the Creation starts, how the radiation, which is the essence of the

beginning of the radiation, of the creation and feeding it, starts the World of Creation. When we speak about in a way of creation of Carbon 16 (C16), the dimension of this Universe, as the field to return back, as the field move and they bend, they interact with each other. And that interaction, in part, not having the inertia allocation of, becomes the radiation, and the Cosmic Rays, and cosmic radiation in the Universe are created. And those of interactions, like a knife or the stone, to sharpen it, reach an Inertia of the position and time of the galaxy or the Solar System, we see them as cosmic dust. Now we understand the whole process of the production, the whole process of interaction, the whole process of how, even when you have a magnetical field, and then you have a gravitational fields of an element,

(1:08) interacting with each other in that plasma, they create the same condition, as in the speaker, they interact with each other, and their interaction leads to creation of Cosmic Rays, and viruses, and everything else. In the world of the Man, we brought a knife as hard as we could, we wanted to sharpen it, with a turning wheel. Here the two turning wheels depends how the knowledge of the Man will increase to understand how to bring these two fields together. That leads to creation of what? Then you understand we don't need to take material into a space because we understand how to compress the rays of the plasma itself, let alone the dimension of the creation of the matter. (Would you like to take over? Please).

This is the secret of the Creation. This is what I brought out and as I always said, by choice, by connection of the Souls, by destiny of the Man, Rick chooses the right Intro for that session. When you look at this picture on your screen, remember one important point, and that is, Man does not need to make so much fallacy, not today, not tomorrow, as he has made in the past, for it to see the truth about the World of Creation. For it to be able to transmute. (1:10) In the coming time I show you, teach you, how we make you to transmute into the strength you want to transmute. And how you can connect in that dimension of transmutation. Those of you who join us in the session tomorrow in the monthly session, bring with you a picture, doesn't matter an object, a fruit, your lover, your mother, with you. Come into the session with that material in hand. And then we'll see how we can get you to understand more about yourself and the fields created by you through the dimension of the interaction of the plasmas. You're cocaine addict. Tomorrow, nobody knows, bring that cocaine, and see how much you're attached to it, and how much will be detached from it. This is the process of understanding, the addition, taking, interacting, the fields of the plasma, and not the plasmas. So, we are going in the knowledge of the man one step further, the essence of the Creation, the origin of the Creation, the origin of magnetic fields, which is the title of the Book number 8. (1:12) Now, if you understood the teaching of today. If you understood the essence of

the knowledge, then many of you should be able to create anything you like, the way you like. Be it emotion, be it transmutation, be the dimension of physical matter of the man. In so many ways, a couple of years ago, we hid this knowledge in the shape of pictures, if you remember in Linz, where you could go between the two pictures, and if the material was chosen by us, you feel the feeling. In the same process you become part of that process between these two reactors as you see on your screen. These are the two paintings and you in the middle, the object of observation, change. And if you get the field right, if you get everything else right, you go back to what I used to call, as a joke, in Iran, in Sharif Tehran University, to our bodyguards. It was very easy, because I didn't have a detection system to be able to, in a way say the field strength of it, because it's a plasmatic strength,

(1:14) and we didn't have the tools to measure, but we had humans to measure. As I said what I did once you understand the knowledge you can play any games with it. Our protection officers were always behind the door in Sharif Tehran University. And when I was in the lab, they're always standing on either side of the door most of the time. And for somebody like me, they don't understand it. I put the first, the reactor, the small one you see, and the big one, one on the floor, and one on the table. And this is the door. I asked them, "Oh, can you come in? I want to check something." And I watch them coming, walking. And

this is the window of the lab. And as they walk towards it, I wait for them to see, wait there, when they would bend. It was just somebody putting hands in your body and tickling you, and you bend, you react. And I say, oh, thank you very much. When they go out, I mark the floor. The field has expanded this much to convert into the man state of energy. So the body guards became the dimension of the fields of the understanding how much we exposed, how much we expanded the fields. And then move this reactor a bit closer and again they come in you ask them to come in for, oh, this has come this way, so they feel it is stronger and I move it the other way.

(1:16) There is no difference between this and that nut on the panel of the Hinkley nuclear power station. There is a nut, I see a reaction. Here is a human, I see the reaction. And as it was in Intro, if you know how to run these two, you bring me the fastest B-52 and every other bomber Americans have made. I create a field, you have no gold, sorry. It drops like a leaf. The present warfare tools of the Man has no match, is no match to the science of Creator. Here is a nut on the wall, here is the body of the Man, here is a piece of whatever in a microchip. It is interesting to understand, it is interesting to in a way comprehend the essence of the physics, essence of knowledge of interaction. And then any knowledge seeker can play the game but specializing what game they choose, where with the knowledge we carry the same knowledge in chemistry, physics, biology, cosmology,

Space and every other knowledge. Because we understand the essence, we are not the magicians, and it fits in how you want to 'glove it.'

(1:18) This is interesting when you are a Universal Teacher, as you understand the whole working of the Universe, in that way you can teach. Where you as humans and in individuality you're only interested in little bit, maybe electricity, maybe one small part of the chemistry, and the rest of it. If you understand the essence you can fit it to any sense, to any dimension. And today I brought you very close to knowledge of understanding the World of Creation. And it depends on how much you understood, and what you understood. And please do not throw your MaGravs away and do not turn them upside down, because you don't know how you made the MaGravs. And even if you did, if you use the right material, you can create yourself bigger problem. It's a wormhole, that man does not know the worm or the hole. And you can get yourself in a bigger hole than you could ever think. We go for a small break and we come back Rick. And hopefully we add to the knowledge a little bit more.

>> BREAK >> 573 KSW January 16, 2025

Part 2

(1:24). K- ... Yes, thank you very much. Those of you who join us tomorrow in the session, please try to come in a mindset of what you want to achieve. Just don't turn up because there is a session. In a way we would like you for the first time to predetermine your emotion than your destination. And then in the process we handle the emotion for you to reach, to be able to phase into what we call, transmutation. And try to be this time, please, as quiet possible because you're a bunch of noisy people and try to be in a way connected to yourself. Then trying to connect to us that you determine how and where you going to go.

(1:26) Those of you who join us in the sessions of February, March and April we'll ask I ask you to bring pieces with you which allows you to enter a new dimension, a new, what we call, energy fields, which make it much easier and possible to achieve what is your ultimate goal for transmutation. But tomorrow come with, because you have to learn how to control your emotion, that when you are transmute you don't end up in the wrong place. For those of you who are in the process of understanding technology in a different way, and be able to see it in a way to believe it and the rest of it, Keshe Foundation in next maximum week, two weeks, will make announcement which affects the work of the Keshe Foundation internationally. And be prepared for what is to come and what we set up years ago and now we have the

opportunity to bring it into what we call, international arena. We are not looking for specific type of people, but you're looking for a specific type of scientist in the

Keshe Foundation, and we'll tell you exactly what we're going to do and how it's going to be, and the evolution in which we bring with what has been set up now, through Trump Administration. And we allow this to become a positive move towards the work of the Keshe Foundation, and hopefully if things goes the way we like, you will see we start our influence in the American work,

(1:28) and the American way. And with it will affect other countries and other nations and working with other nations. So if you're a scientist, we know many of you are, watch for advertising, or watch for any announcement on the Keshe Foundation. We don't want Knowledge Seekers who just think they know, we want scientists who actually know what they know and they understand the plasma technology to be part of this change which is about to come. Any questions?

Q: ... Thank you for these new dimensions of knowledge, and I'm wondering if you have any suggestions on how to improve this dimension of knowledge. Thank you. I have a question. Do you plan or did you consider a twin Gans for dental care? K- We have a problem with dental. And that is that we have tried to grow a tooth and do all sorts of things for past 20 years, maybe more. It goes back to 1980s, because I always was challenged by my sister as a dentist, 'grow a tooth, grow a tooth.' And when you

come to the tooth as you see with the two with the girls in Switzerland with the Corona,

(1:30) how we created. We can create tooth, we can interact with the emotion to lead to the creation of. And I don't know if you have heard about the latest research from Japan, that they have managed to find, whatever they call, the protein, an enzyme, or whatever, that can lead to creation of tooth. They can grow any tooth. But what the scientists say, they cannot stop it. So in a way, like sharks, you can keep on growing tooth and the old one falls out and the new one comes out, what happened when we were six, seven years old. Japanese scientists announced that they have found a gene that leads to reproduction of the tooth, but they cannot stop it. So you keep on shredding teeth and the new one comes out next behind it. The essence of creation of the tooth is emotional and then understanding the process which the brain has locked into it as we've shown before. It needs time and it needs patience and it's not something which is going to happen in overnight. The growth of the tooth, if it comes in the future, as we've done so many trials and tests and everything it should be like braces which you what you call it, wear, we see a lot of people children wear especially braces to hold their teeth in a position. The ultimate point is something like this, a brace in the location where you want the tooth to be grown in a way implanted or locked into support of the hanging on the other tooth on either side.

(1:32) And then creating the condition through the emotion to grow. And it will be replication of what it was lost. These are part of the future testing as we are not at this moment involved in this kind of ???. We don't get involved. We did some testing, we know how it's done. So it's exactly like growing the brain. You've seen how the brain is done, it's the same replication. But hopefully in the near future Markray will, what you call it, open this market for many researchers to come and develop it. Any other question? Q: Well that kind of as a segue to Brett's question about the cheese. He had a document with essential amino acids. Let me show that here. Maybe it'll help explain a little bit about his question. And he's got the essential amino acids and also the non essential amino acids. And it mentions, he's talked about according to his research that it's 'Emmental cheese' that is producing the correct amino acids to help with the teeth. So he had a question or he was asking whether he is correct in his deduction that it's the Emmental cheese it's called, which we can see in this chart here, down toward the bottom there's serine and proline, which are amino acids that seem to be associated with those cheese, (1:34) with that particular kind of cheese. I can bring up maybe the Wikipedia on that cheese and it's kind of interesting. K- Rick has done a lot of research on this. R: Well, not that much, but it's just I didn't know whether to how far to take this so I kind of have to dive in sometimes. Here's the Wikipedia on this Emmental cheese, which is a yellow medium hard

cheese originated in the M-valley in Switzerland. It's a Swiss type cheese, as you can tell by all the holes, I suppose. K- Like their mountains. R: As seen in the cartoons. So it mentions three types of bacteria are needed to prepare this type of cheesy emmental. The *Streptococcus thermophilus*, the *Lactobacillus helveticus*, and the *Propionibacterium freudenreichii*. And I'm wondering if those types of bacteria might be something to do with the enzymes, maybe they help convert the amino acids into the correct enzymes or some sort of interaction there perhaps. K- This is why all the Swiss people have such gorgeous teeth, you mean, they eat too much of that? It's a combination of things. It's a combination of the... it's not the enzymes, it's actually the fields which is used.

(1:36) We don't use any enzyme, we didn't use anything. If you look at the teeth of the young girl which was shown to be grown. We've done the same thing with the bone. As I said in the very recent past, we have developed a technology in a way that heals, what you call it, seals the bone fracture and bone breakage. And we treat it in less than 24 hours. But trying to repeat it goes back into the hand of the scientists to be tested and trialed. It's like a oil mixture and the bone just grows within it and any inflammation, any blood clots, anything, around the bone, we usually traditionally seen, within hours disappear. But the understanding the process and how to do it, you can do the same thing with the tooth. But tooth has a cycle, it's not just growing the tooth.

You have to open up the root channels, the nerve systems and everything else to it, that once you've created it, it works as a functional organ. Because every single tooth is one organ, it's got its own operation. The position of the tooth in the mouth, then if you take one out and position something else, you'll find out your taste buds, the taste changes, the position of the taste changes. Our tooth is not just something that we chew in, it creates a reactor and it's part of that piece of reactor which is called the mouth, the conversion.

(1:38) So this is why growing a tooth is more complicated than anything else, but when the body does it... In one lecture, some time ago, I explained with the shape of a tooth, the shape of the mouth, that the tooth structure comes, you can see the STM, you can see the essence of the personality of the person. You watch how the jaw shapes, how the teeth are, how they position, the length, the height, the structure which are placed by the jaws. You can tell a lot about a Man. In telling about a man, you tell him about the behavior and the STM. You create a reactor. And one of the reasons why we change at the age of seven, eight, our teeth, they fall out. Scientifically now we know in the foundation of a child is set at the age of seven. You can teach everything you like. What you see in the child at the age of seven is more or less what you see in the man at the age of seventy. And why does the tooth have to change at that age. This is the question which brings us back to the emotion, it

brings us back to the, what we call, the functionality of. This is where in the matter state, once you enter it, it changes into the plasma state.

(1:40) In a way, when you look at a tooth, being Calcium, creating, being in the plasmatic condition of the, what we call, vacuum of the body, even though you think your mouth is open, you enter a food in a plasma condition, or in magnetic field condition of the head of the man, is the reason why Calcium has become the seed of every cell of the man. The first condition of conversion it can become a cell is to accept the magnetic field of the Calcium which is in the tooth. Science has never understood this. We just chew, but our mouth is... it's a different world when you put material in it. It's not outside even your mouth is open. They say you chew your food and then you swallow. Chew it well. That chewing is not just crushing it. You give it the strength, the fields that you already set a solid base for Calcium for your digestion system to become part of to stay healthy to be able to do other things. Function of the tooth is not just to be there to crush. It sets the scene for the seed of every cell in the body of the man. Every tooth in the back and the front and in a certain position allows certain calcium magnetic fields that it cannot even change in the stomach and intestine to become part of your bone and part of your, what you call,

(1:42) defense and part of the cell, red cell and whatever cell, white cell in your body, which comes through your bone marrow. It's set by the fields of it.

You got to remember a tooth is a live thing, it's not there and gone and that's it stays in that position. And being a live thing, it has a plasmatic fields. The shape of your tooth dictates even what cancer you get, when you're going to be ill. Because the strength of the seed of the Calcium for that cell is set in your mouth. It is the first catalyst in conversion of the energy into matter state of the cell of the body of the Man. In so many ways, if you need a replacement for a bone on your ribs, your mouth dictates that, creation of that, how much Calcium of that is needed. And this is what you have, the nerves. You try, you go back and see when you had a tooth. Why even we change characteristics by dentures. I had this discussion with my sister years

and years ago. She used to work in a dental surgery in North of Manchester. And in 1970s, 80s, because of sudden rapid introduction of the sweets, many children by the age of 10, 11, hardly had any teeth. So, they had to extract all the, everything out, and 12, 14 year old children were wearing dentures. Full dentures.

(1:44) And, we discussed this many times, she says, I don't understand young children, I have to pull out one or two or three because everything else is rotten, and then put the denture in, how can we stop this? And I always used to tell her, it's not a habit we have to change, we have to understand that in what you put in their mouth as a denture, will create the man in the future. And we see the children of that time are very

detached, that they have no social responsibility. And we see a lot of criminality in the societies which was there, and a lot of poverty. It comes as part of how the teeth which is thrown away and we take it out, shapes the character of the man. And we never look at it. I always looked at this because it is... why does it... it's the first thing we come in touch with in our body when we let something come in. Why don't we chew the water? Have you ever tried to chew water, do you know what effect will have on your body if you just chew water? How much you will change the dimension of the emotion. Sound ridiculous, but you have to understand your tooth is like a sun and the other tooth on the other jaw is like the moon, they radiate, they are not they are plasmas in the solid state, you want to call it. But when you crush it, what we spoke about the radiation,

(1:46) how you create that crushing, how you introduce the field of the plasma. And then what you do with it, it's like a mixer, you keep on adding saliva to it, water to it, to make it much easier to do. One of the most important, ?? is ?? organ ?? than anything else, every single tooth, is the tooth of the man. And that's why it's on the 'front line.' You find they talk about root filling, they talk about all sorts of things, they talk about mercury in the mouth. You just watch why and how people change. You watch a lot of actors and actresses, how they change their dentures and how their mouth changes and how their character changes. They don't speak the same. But it's not just

that. The character changes because, it's not them anymore. It's a fixed. When you change your tooth, every cell changes continuously, the neural system, the blood circulation, it changes. Why? Couldn't the body of the man just pop in the tooth and like your nail and just leave it there? Why does it supply blood to it? Why does it have a nerve? What's got nerve to do with the tooth? What it's got the blood circulation to do with the tooth? Because their interaction creates the material, and it has emotion and it dictates what is the body needed. What blood comes into the tooth decides what's going to be digested in the system and what's going to become the, what we call, your immune system. The immune system of the body, in sending the blood to the tooth decides what Calcium is needed for the immune system to be. You have people with the cancer, change the composition of the mouth in a way,

(1:48) the chewing or whatever, you can get rid of half of it. Because it's not just a blood vessel, it's not just the nerve. It has a reason that he feeds it. It's the first thing the kidney, the liver, the pancreas through that blood sends the information to us. This is the combination of the food we need the Calcium base of, because every cell of the body of the Man has a Calcium in it, and the seed of that the strength of that seed of the Calcium is dictated in your mouth, in your chewing, by your teeth, the condition of. Scientists have never ever researched on the connection between the dentures and different diseases.

Alzheimer's, Parkinson's, we measure the mercury and this and that, but we never measured what did a denture do when you have what is changed, what changes brings. So it's not just growing a tooth. You have to establish the bloodline and nerve line to it that it can survive and then it creates a character of the Man, it brings the body of the Man. You watch people with the same tooth and lips structure have the same behavior. Why? Because it creates a field, that that field creates certain fields of the Calcium in the body which creates that kind of characteristics. Growing your tooth is not just the tooth, it's understanding the essence of the creation of the Man,

(1:50) because this is where literally the basis for your life is set. That tooth is not just something to grind, it decides what becomes part of your body in digestion. It's the first phase. And then, in so many ways, decides what part of it is absorbed by the Soul. In going down your, back of your throat, near the cell of the, what we call, center of the body of the Man, the STM. When you chew water, you're hammering on a Hydrogen, line to the Creator. Now you understand why I tell you chew water, then you understand what you're doing to yourself and elevation of the STM. It's much more to it than just growing it. Any other question? Q: ... I saw online that people have begun to make drone, boat and car toys that are powered by ionic plasma thrusters and use no fossil fuel. Are these similar to the plasma engines that Keshe talks about and are they the future? K- I don't know nothing

about it. R: Well, we've got Wikipedia open here. If we go to Ionic Plasma Thruster. Actually Elon Musk is playing with that. I believe for his... it's also used in satellites.

(1:52) K- Ah, I know this. NASA has been working on this long time... I know which one it is... now I understand. R: It is the NASA one here for example. K- No, this is a different thing. ... It's still using what we call, matter state on the field state. If you look at the UFOs, they don't have such a thing. There is a race in part of the Universe, which is actually they are known for this, they are very good at this job. You know like the Earth people are known as the 'wheelers,' these people are known for this technology, this knowledge. And in a way they create motion with directional motion of this. But with the plasma technology is totally different than this, using ions. NASA played with this in early 2020s, with this replacing the jet propulsion and they said with this, they, what you call it, can go to Mars and Moon in four hours and six hours. That Ion ?? was one of their proposals. And it's been developed in different ways. You have to understand when you come to these things, it's totally different than plasma technology. Plasma technology uses interaction of the fields of the Universe, does not trust, or pushes the fields in a given direction, or producing it to become part of the push.

(1:54) Very simple explanation of this, if you understand with the plasma technology. In plasma

technology we behave like the Universe does. We don't push ourselves away. We create a direction to be pulled to. It's a totally different technology. Or we're rejected by. This Ionic Thrusters, and jet propulsion and everything, relies on a forcing away. We rely on moving away. It's a totally different technology. But this I know, now I understand what you're talking about. This has been going on for quite some time in NASA. Russian Space Agency has developed this in much deeper way. I've seen this with the Russians in different structure, years ago in 1990s. Something ... talking about this something was very interesting that, you know when we look at the history of the nuclear and the space, how the German scientists when they lost the war went to the Russia, or they went to America and they stayed there for them to be attracted to. We saw the same thing in the 1990s when the Russian structure blew up and it got divided and some of the what we call, Eastern Blocs. Many of the scientists with thoughts, and knowledge's, and research on this tried to do what the Russians did, what the Germans did. Try to attract Americans and other scientists of other nations to back them and come up with new fuels, and this was one of them. (1:56) Russian, this technology because I was involved in that kind of thing in those days is part of it. The Russians have done a lot of this propulsion with ions, or ?? field pushing through structures. But in the plasma technology we don't do such a thing. You can do it and some races are very, very powerful with this

work, very, very good. And there is NASA has done some work on this, Ionic propulsion for travel to Mars and Moon. They can say it shortens the time. But just to watch the space in the next few weeks and months what will come out of the Keshe Foundation. We have moved from the phase of research into commercialization in a big way in the next few weeks, and then you will see we will work on the international arena. Whatever we say we put on the table we show. Any other question? Q: ... Hello Mr. Keshe, what is in plasma terminology, this light that comes through the hands of the Soul when it is healing. What is, I guess what is it called in plasma technology? K- Repeat, can you repeat? R: What, I think it means, what is it called in plasma terminology, this light that comes through the hands of the Soul when it is healing? K- Of the Soul?

(1:58) I don't understand what it means coming out of the hand of the Soul. R: I guess when people are doing hands-on healing, or healing with the fields of the hands, they maybe see a light, or feel a light that comes through, some people might... K- We see the light, we can create a ball of light. We can create the fields to interact with the body of the man and what you call, you might call it the Soul of the light, I don't understand. But, it depending on the feel, the strength of two hands and the object in between, you can transfer energy and feel the light. and transfer energy and fields, we know this, I mean it's a well-known fact. But, we have no terminology for it in our system. I'm

sure somebody will make a terminology for it, or in the future, but ?? it's there. Q: ... Mr. Keshe, can something be done to get in line to stop the bloodthirsty, dark ?? SOB from Tel Aviv? I don't know if we want to get into... K- We see the end of Netanyahu within next few days. As we know, with the ... stepping back...

(2:00) I told that to the Iranian people, who are in the government, in the leadership, in the past few days. This is not something unknown. With the permission of the Ayatollah Khamenei of Iran, Hamas has come to an agreement to release the hostages. Which is supposed to start some sort of shape before Sunday night, before inauguration of Trump. And this could not happen if the Iranian leadership would not step back to do it, because, they could have done that months ago, but now we see another structure. But, Netanyahu will try to say that he released their hostages, and make a thing out of it, that he's triumphant. But in a way, it's a biggest step back for it, because he has to give the whole Gaza Strip back, and then there is huge penalties which is going to be leveraged against Israel for the damages done. And the opposition leader, as we see it, will not support it, will come to the collapse of his government, and we'll see how it takes shape in his arrest and the rest of it. Even though Senate in past few days has passed a rule and a condition that he'll welcome United States and he harbored. But in general we are at the end of this episode of killing by Israel. But as I said, because

I've been involved in Palestinian affairs for over 40 years, 50 years, the Israeli companies are rubbing their hands because every time Israel damaged the Gaza Strip, or Golan heights, and the rest of it or into southern Lebanon, the Israeli merchants of the what I call,

(2:02) sand and cement and iron became the financiers of this building, rebuilding these cities. So you see a huge increase in what you call, GDP of Israel. It's selling the same material for the Israelis, for the Palestinians to build and then in 5 or 10 years time they destroy it again. It's a very fun job. I said this before. Israelis look forward for the government to destroy these cities and then they sell the material to them because literally they're strapped to it. And now they're counting the bank accounts, how healthy it's going to be to build these cities, it cost trillions. And a lot of it will go to the Israelis because of their embargoes and the rest of it. But the biggest problem with this negotiation is one of the hardcore Palestinian terrorists and the rest are on the list of being freed. And this is frightening for what you call, the Israelis. It's hundreds of prisoners against thousands and thousands of prisoners. And on top of the list this time, they want all the leaders, because all the leaders (have been) killed. And we'll see how he tried to make it as his triumph, but in a way, it's the beginning of the end for him, because without it he doesn't have majority, and without it he's end up in jail. The demise of him is on the horizon, but how after Sunday will

take shape. Because Iran couldn't give any excuse to Americans that they're hostages of whatever, for Iran to get pulled into the war. And the situation is very fragile as it is in Iran, and we soon will change, (2:04) change of leadership in Iran, because Ayatollah Khamenei is old. And we'll have enough struggles inside and Americans have already chosen the next president of Iran. He's getting well trained and taught and paid for it. We all know the guy, he'll be in public again but as I said, what I'm telling you is not a secret. I already explained that to the Iranian leadership, they know. So, we have to see how the game gets played. But not much left for this saga by Monday, by Sunday night, Hamas has already agreed, Hamas cannot agree without the clearance from the Ayatollah Khamenei of Iran. And there is enough pressure. They lost Syria. They lost everything else. And they will, Hamas will agree, but could not agree without the permission from Tehran. Trying to save their skin at the moment. Any other question? Q: Good morning Mr. Keshe. K- Good morning. How are you? Q: Very good, thank you. K- How's that Aussie land? Q: Everything is good. Everything's good. Very busy with fruit still, packing, picking and packing today. I'm sore. As we get older it's harder and harder. K- Yeah but there won't be needed very soon don't worry. Q: No but, it's all right. I was just thinking with a you know I think from the last teachings. I didn't catch this teachings because I was packing fruit, but I've come in now.

(2:06) Last teaching, it was you know talking about energy and I was thinking about that, where in the Cold War, the energy, you know, once the Cold War was finished, or to a certain extent over, that energy had to go somewhere, and it went into the stock market, but then of course it went into weapons manufacturing companies and all that sort of stuff. But now that's sort of to me coming to an end, because of the plasma technology. So that energy, if that goes into plasma technology then we can see a very bright future because it's going in the right direction rather than in the direction where with the stock market it was all to do with competition and greed. In your technology, it creates a level playing field and that's how I see it. So it's positive. I see the bright future. K- I hope so. The biggest changes, we... it's not something that we are going to do, it's something we are already doing. Some of the Knowledge Seekers who work with me around, know what's going on. You got to realize that everything has a cartel, be it the wheat, be it the potato, be it the oil, be it the banking, be it the gold, and diamond and the rest of it. And with even the defense, as I said, with the B-52s and this latest aircraft and the rest. With this technology, now that is... there's no way to stop it anymore. We don't want to stop it and I'm bent backwards this year,

(2:08) to see all aspects of the technology on the international markets, international level. And many of the Knowledge Seekers (KS) in the background are helping us with this, who know what we are doing. Is

when we... not now, when... now that we are releasing technology. The first energy release will be the Gas Production Unit. You will see that in the international market. This will touch the energy. The power production will be the second, followed immediately. So we will touch in a way, I was thinking about it this morning before teaching, Saudi Arabia will have no value. And all the gold's they rely on with us introducing production of materials, especially rare Earth materials and gold and the rest of it, they, all these shiny palaces, will have nothing to support. In next five or ten years, in rapid development, by all the nations, because of the little cost, will change in, and then becomes like a, as I said, in the supermarkets you go and there is nothing you need to buy. You got to realize in the coming time when we start relying on the energy technology as a plasma energy not energy as oil energy and whatever. When we look at it we don't need food, would we have the mouth even we see a problem as you are plugging it. I don't have money to eat but I can pick up the energy, I don't die of hunger, but as we go through the transition of relying on energy, energy posts like a lamppost, you pass on the street, they give you the energies. Would I need to eat?

(2:10) I don't have the mouth to eat, because I exchange it for energy directly to my Soul, or to my physicality, or whatever. There's much deeper work into this. And then it comes to the position of, do I need to create arms, the conflicts, because I don't

need for it. This technology is going to see its biggest battles in next 12 months on the international arena. 2025 is the year that I've decided it's time for change. And those who are around me and work with me closely, they know what I'm talking about. We do not fight. We just keep on introducing new technologies and as people pick up the technologies. We are in there with you lot, you supported us, you Knowledge Seekers in every shape or form in past years stood there. We put Gans's out, you tested it. We put system out, you came volunteered to use it. You as Knowledge Seekers have done such a great job of unforgettable work for humanity. You will understand your positions in the coming time. Unconditionally how many of you took everything and taught everything. And 2025 is the time because we done all the testing. You look at it, we done the agricultural tests, we done the health tests, we done the material production tests, everything is done. Now this year, we bring it into the market in a very big way. In a very, very big way.

(2:12) We relied up to now on you Knowledge Seekers to support us by buying a system, supporting us with trials and everything else. We still carry on doing that because this way we stay untainted, nothing can interfere with our work. But in a very near future, we will go out to, not on a banner of changing the energy, on a banner of helping the people to get. And, you will see the change Keshe Foundation brings. And as it comes as it is. I was watching a video

very recently where you see the fires in California and they talk about the houses of 14 million, 20 million, how many hundreds of thousands of houses burned to the ground and blah, blah. Move 10 kilometers away you have a tent worth \$5 a guy living on the street and there are rows and rows of them. How come within a few kilometers one worth billions, millions and one on the street has to beg for the food in the same city? When you look at this fire situation with California, it's amazing, you're talking about a 500 meter square land for 15, 20, 30 million just to be on the beach. Who created this wealth? And the center of it which is a what you call it, Hollywood studios are in danger of them they might burn, and then what happen, where does the money come from for it?

(2:14) They all move to the Florida or Hollywood and then they get earthquake. With this new technology what I said as a Oasis system is on the card and we're going out with it. A system which can give the water, energy and the gas if you need it. But you need the gas, you will understand later on why you need the gas. Because when you add it in a certain combination it becomes your food. In next few weeks you will see the emergence of the Keshe Foundation on the international market. We will see a lot of problems. I've prepared myself for assassination, I've prepared myself for everything else, and we've seen how governments knowing what we are doing they're moving around it. But we set the structure with the help of you years ago ?? through Markray and other

channels. So we will touch the energy, we touch the food, we touch them everything else, so they have to come up with a new structure. When you're a poor man, you're hungry, you don't need to look in the bins and then see what you find to eat. You just go to a room, a lamp, which radiates the energy for you to receive energy. And this is what it is, and we stop these people who even have don't do. I'm getting ?? fed, so what should I do? Three, four weeks ago I was in the shopping center and I just sat.

(2:16) You have these halls with all the different options of food, and the dining area in the middle. I just picked up the food, sat to eat and next to me unknowingly was this where they put the trays of... I never noticed the trays of food and this guy comes, he's looking in the trays. I thought that's... could be very rough looking guy, young and he attracted me in a way. I went and I tapped on his shoulder and I said, "Are you hungry?" he said, "Yes, very much." I said, "Go to any stall, order any food, I'll pay for it." He went to a Mexican and he said something very strange, he said, I'm not used to choosing because he was looking at the board. He said, "I never had the money to choose. I pick what's on the trays." And I said to the guy, "Whatever he chooses, I pay for it." He picked the food and he sat down. And when I finished my meal, I still had a salad which wasn't open. I thought I'll give him the salad. I walked around I found him he was still eating with his hands with a long nail. And I said to him this is the salad it might help you. And I

started talking to him. I said, why are you in this position? He said, I'm not homeless. I said what? He said, I have a home, I have apartment, I am Austrian, and I'm not foreigner, and I get paid by my government. But I don't want to work. They pay me, why should I work 20 hours, 30 hours just to get paid whether they pay me now.

(2:18) And I said, is this the essence what you do for a living? He said, I'm a specialist in whatever sports or whatever. I said, why have you wasted your life? He said, I don't waste my life. It's just why should I waste my life working for something else? And this brought me home. What would happen to us when we make everything free to Man? Would we get a lot of these people hanging around because all they need to go under the system and they get food. Would they participate in the social life? Would they bring anything extra? Would there be any incentive for us to do? This thing was in a way harsh, it wasn't harsh, it wasn't the first time I've seen it. In England we had this when I used to run business, people refused to work because they used to get unemployment, why should they work 40 hours for 50 percent extra, 30 percent extra. Then you have to understand this, this new structure without them knowing or without understanding, ends up with all the drug trafficking. They can produce as much as they like, but people can get addicted (to the drugs). And the change on the human race with this technology in the next 50 years is going to be huge. But would there be enough

people on this planet to be able to support life? It's the biggest problem. Would we still see, this is what I said to a couple of people in Defense very recently, matter of days ago, you build the latest technologies, and I just put two reactors on one side of a nation,

(2:20) I know how to do it and cover it. In the very near future, very, very near future, we'll use a technology which in a way, Tesla understood part of it. And he developed this system between Moscow and New York running his car. This technology is well known by us and we bring it into the market in a different way. Very different way. And you will understand it. It's the same with the structure of the buildings and the past buildings and how our buildings were built. All this knowledge, it'll come into fruition, where we don't need to do much. Many of you Knowledge Seekers, without you knowing in a way, especially in the past two sessions of the Friday sessions per month, you've gone through this. We have implemented it and we get the feedbacks in your testimonials you write to us, and when you read three, four, or five testimonials, and then in six, and in seven months, and you see they all talk about the same thing. So it's correct. We... how many of you tomorrow after the session will feel peaceful? I say 80% of you, because we have set up to do that. You'll find peace within yourself because we know how to do it. And when you feel like this, would you take up arms? Would you go into war? The beauty with this

technology now is that the story of the reactor and the metal piece hanging on it.

(2:22) They keep on changing the nuts and the bolts and composition of the material. We understood the power, the effect of radiation and fields. And I can change it with the fields. They can make as much injections and whatever, whatever they like. Would we touch plastic? Or would we use the plastic to create the next generation of life? And then we said, "It was a blessing that Man created so much plastic." You look at the plastic as a menace. In my life, in my way of thinking, if you understand it's got a combination of the Carbon and Hydrogen, it's the fuel to travel the span of the Universe, and there is so much of it around. It's just knowing how to salvage it and knowing how to process it. Understand? This is the biggest change and I'm bent backwards to bring the change in 2025 and we are working on it, everything is started and we are and we have it we have a good position hopefully for a few months till I say things go upside down with Trump in administration trying to push for a peaceful. But in a way is creating new wars with Canada and Mexico and trying to push other things to bring that change in. As I said, in a couple of years time we offer two dollars for Tesla Car company as a whole. You will understand very soon why. Because nobody is prepared to buy electric cars. Nobody is prepared to buy electric cars.

(2:24) And nobody will work to manufacture electric cars. You will see, I hope, our work and what we are

doing will go ahead. And the ground has been created for the change and it's an opportunity to take. And we are grabbing that opportunity. Hopefully we'll bring a team together, we can bring it in and bring the change. 2025 is the year of the change and Keshe Foundation has already worked and working on it to bring that change. We'll have a lot of enemies. Believe me, it's not going to be easy. We are coming through the back door in a very silent way. We'll see. We still need support, we need a lot of support to be able to bring this home the correct way. But on the other hand there is a... there is opportunity we cannot miss. And if we miss it, it's going to be a big disaster. Any other question? Q: ... Suppose that in a CO2 Gans production set-up we twist both the copper Nano-coil and the zinc-coil once counterclockwise and once again both clockwise to generate CO2 Gans.

(2:26) What is the difference in similarity between the two CO2 Gans's? K- It's different spectrum of energy, that's all. That's all it is. If you look at your brain, see how many twists are in it, then you understand. You just produce different spectrum of energy fields. R: How would we be able to tell whether one way is a more of an advantage than another? K- For what purpose? What could be advantages for certain purpose and disadvantage for another? R: So how did the experimenter, find out? Just try both of them and see what they... K- Yes, of course. This is how the test is. But in the future we will understand the power of the plasma. We've seen this in a... If you remember

Rick, some years ago, Knowledge Seekers put Gans's together and they were rotating in different directions and speeds, you remember. That's where it comes from. Different strength, different... It's like different magnets of different strength putting it. R: We had a question in the plasma group regarding the twist or clockwise or counterclockwise winding of the coil, like in the MaGrav for example. And whether that would make a ... you know, what kind of difference that could make. K- A lot! A lot. A lot. A lot. A lot. R: Is that part of the secrets let's say that we're missing on the MaGrav? Is the winding?

(2:28) K- Not really, we always wind ... Do you remember how much discussion we had for years? Left turn and right. R: I hesitate to bring up this subject because of all that, yes. K- Yeah, everybody has tried in every direction and some don't work, some works. And the ones who don't work, we keep on telling them, they don't understand why it works, why it doesn't work. Those of you who doesn't work, is because you've done the winding might wrong, and you don't want to understand, but to you is right and... I make a MaGrav system and it works it gives what I want. We do that in the lab all the time. How come you lot make a MaGrav and say it doesn't work? I make MaGrav in a specific way and it gives me what I want from it, even though I don't want electricity. I never built a MaGrav to produce electricity. I always produced MaGravs to create fields. And that was the whole essence of the MaGrav production. But we had

to get you interested because of the energy. You know, you want to get there, you know, you go to the circus you want to get there, little pony to what you like, you keep a carrot in your pocket or a sweet. And that electricity was that sweet, that in the future man will follow up. Very few Knowledge Seekers, very few, if one or two, even partially understood the work of, real work of MaGravs. But then they got lost in the process of other things after production. Our friend in Philippines, he has a good grasp of it, but he lost (it) in the process of the energy production.

(2:30) We have friends in Thailand who are doing the same but still haven't grasped the whole You don't need so much, you need very little to create, especially if you understood the teaching of today. Turns it upside down, turn it inside out, left-handed, right-handed, you have to understand what you're turning, how you're turning. The reason you turning about purpose because if it's not that purpose, it doesn't work, it's doing something else but you're not aware of it so it doesn't do, it's not working. You remember in one of the trials in Arizona, there was a guy who was detecting the fields and even about 200 yards outside and could still detect it. MaGravs can be... I have to ???. The fields of the MaGravs can have no limitation. Now you turn it and twist it the way you like. The most effective MaGrav, if you understand it, how it's done, is these Butterflies we sell. It's a MaGrav system. But you don't see it, you call it a Butterfly. Any other question? Q: ...

(2:32) I'm spreading full spectrum LED light from 300 nanometer to 830 nanometer through plastic rings filled with CO₂ and CH₃ Gases to grow plants. Do you have any advice on this? K- Pardon? R: Well, he's putting light through plastic rings filled with Gases for plants, to grow plants, and he's trying to get advice on it. It's full spectrum LED light going through plastic rings filled with CO₂ and CH₃, in order to grow plants. So, any particular advice, do you understand what was... what he's saying there? K- I don't understand, I'm not with you, I'm somewhere else I think. R: Yeah, if you can imagine a light passing through a plastic ring, filled with CO₂ Gases and CH₃ Gases, would that change the light somehow to make it better for plants? Let's put it that way. Is there some use for, maybe, a convert... converting the regular, full spectrum LED light into something more effective for plants, through the Gases water? K- I don't know. R: Maybe he should try it and report back to us. K- Yeah, test it. R: It's pretty simple with plants, they either respond or they don't. And you set up one side with the setup and one side without. K- Yeah. Let us know. Q: ...

(2:34) Are Pain Pads and Plasma Pens the same or for different applications? K- Sorry I lost my microphone. There are different applications. One is localized and one is in a spectrum of area. Totally different. R: The Pain Pen would be the localized one. K- Localized one, yeah. R: Okay. It makes sense. And for both of them, is it true that their restricted to a single person using them? K- We advise, we advise

because it carries a full spectrum of things, yes. We've seen some results and on the back of the results, that's why we advise. It's not just random, there is a reason for it, because you carry certain amino acid structure and others too, and then once it fits into it, now you add into it, but it still interacts, then we can see. R: So it may possibly work for some, but it might be counter... K- It works, no, it works, but you transfer fields. It works with everything, it works with... A lot of people, you have to understand, you know, we got what we call, as a pain tolerance. And people with a high pain tolerance and part of them knowing this, and they come and say they told us that Pain Pen doesn't work on me. And I made them another Pain Pen and says, "Oh, this one works".

(2:36) I said, "Because you have created psychological barrier, I don't touch your nervous system, I've played with your soul what you call it, with your emotion. And it's not that the Pen doesn't work on me, it's just that what emotion you put into it in what direction. It's very much if you have seen many people, they say majority of the people in a very large number like a soft touch. But there are people whose soft touch irritates them. And if you create a pressure touch or not a pain touch but a pressure touch to them is pleasurable. And some people if you run a feather on their skin they go to the God knows heavens. And if you use the same feather on the skin of another person they kick you because to them cannot be tolerated. It's a psychological pattern. And the emotion

and the pain is the same. I didn't change anything in the Pen, I just changed the composition which touches the emotion, oh, this is good, this works. So whatever, you don't understand it's the same thing, but it's not connected to your emotion. So you have to see. If you get a Pain Pen it doesn't work for you so it doesn't work for me whatever and you got a Pain Pad, left the Pain Pen in the Pain Pad for about 10 minutes and take it out and test it again. And then you'll see. Any other question?

(2:38) Q: ... Good day Mr. Keshe, is a plasma in control of itself in space or is it controlled by the environment it's within during transmutation the control point felt external but internal at the same time? K- Yes, it's got both characteristics, position of it how much to give how I take dictated by outside. But in what to give to create that position is decided by inside. This is how we use it for the flight system. It's as simple as that. Any other question? Q: ... Do we live in a spirit matter duality, or is there no matter at all? Does the tangible universe just appear as solid matter to us, when in reality everything is just spirit? K- The only answer you can give to this, which is actually scientific, is the matter state itself is a part of magnetic field spectrum. If you understand, let's say this spectrum of magnetic fields has, let's say, energy level between 5 and 20, to you is matter state. But, if I'm made of, let's say, 50, I can go through this 5 and 20 with ease, for me it's not a matter state.

(2:40) So, is the matter state to you reality because it's your physicality? And is it, does it exist to me which I still have no, what you call it, interaction with to confirm the existence of? Because the energy I carry is above that level that you manifest yourself physicality. To say in English, the birds of the same feather fly together. This is the same. If you are of that type of feather, that's what you see. If you are not, you don't see. In a way you don't, you exist, but it's a matter of getting a, what I call, explain this to a child. Maybe you understand it's easier. You get one of these sugar sticks and try to punch it through ice. It doesn't go through, it's got manifestation of it. You get the same sugar stick and punch it through a cup of tea or water, it just goes right through. It's the same water. You create a combination of it, you made it in a way blocking the field strength of and then you use as a water you can apply to it, it's on the... You emptied the same cup but leave some vapor of that water in there and just go through it that don't even have the resistance of the water. Where is that ?? H₂O. It depends what environment you created and what you observe with that environment. It's the same. It is magnetic field strength dependent on if it is a matter of state and you are in a matter of state you expect to see the matter of state, but something has gone through.

(2:42) We had this very recently, very, very recently that we had this now a couple of occasions where material goes through the body and still stays the

same. Physicality feels it but cannot and will not stay. It's like a bullet going through your body, you have no bleeding, nothing happens and you just feel a little bit of pain because of energy transfer. And this is a reality we have had it in tests, we've seen it. And it happens in our hand it's not somebody reporting it. So, we package the matter in the energy field, which can go through the body and does not exist, but the body is there. But because it goes through in certain physicality interactions, leaves something like a pain and then disappears. We still have the man without any injuries and we still have our pieces intact together as a material. So it's matter energy strength dependent. And in you know in olden days they used to throw a like a rope to catch a bird or whatever and then pull it or you tow a what's called, the ship with a bar or with a rope. Now we can throw the rope through the ship under the end of it and still have a rope but doesn't show any harm to the ship. And we understand the process. When this has happened to us in the very recent past, couple of times, materials can go through bodies,

(2:44) but because they are in a plasma and state condition wrapped, they're at the state that the plasma they go through the body. They don't stay in the body. But because in that transition like the light they hit to each other and you see the light. They leave something as a pain and the pain disappears on its own. In a way a bullet which doesn't kill if you look at it that way. Any other question? Shall we call it a day?

Q: ... Mr. Keshe, I have two questions, one is on the guy you bought a meal for, if he had an apartment and he gets money, the guy you bought a meal for, you bought lunch for, if he had an apartment and he gets allowance from the government, why he doesn't buy food for himself or why he doesn't cut his nail or take care of himself while he is living the way he lives? K- That's exactly what I tell you. Q: What's the reason? K- It's the way he wants to live. That's his choice. This is a freedom of the West. People that have hunger, the other people have it and they don't. In Austria you get paid, I don't know, a thousand four hundred dollars or euros per month, if you are homeless, unemployed or whatever.

(2:46) And then there is a minimum wage of, let's say about 2,000, you get 800 for 160 hours of extra work. And why should you do that? Why should you get up, get ready? Or some people do, because it gives them a joy to be outside to do something. And some people say, "I don't need that extra 400 or 500, but I don't, I don't give whatever." But this is very common in Europe. It's very, very common, especially in Austria. You've got to understand, in Austria, minimum, when you employ a person, you put the whole package together, costs around 50,000 a year, 40 to 50,000 a year. Even a cleaner. There's a minimum and then you have to pay taxes and then they get paid two holidays. We pay one full wage, actually more than a full wage in Christmas and one in June. When you go for Christmas holidays, you are not sure how many

you have enough. And then when you go for your holidays, in summer you have money extra for your holidays. It's a very typical Austria in respect to employment. And then on top of it, you get your 30 days or whatever holidays. So in a way we pay 15 times wages, 15 month wages. And then you multiply this by around about three thousand minimum wage, taxes included, three and a half thousand, you're around about forty, fifty thousand. And they still find this level of income low to live a comfortable life. But some people live with \$50 a year, \$100 a year. We've seen China farmers live with \$25, \$30, \$200, \$300 a year.

(2:48) China has... Let me explain to you. China has over 28 million farmers living behind, below poverty line. That's an internal government statistic. In poverty line it's around about 1800 RMB, which is about \$250. 28 million live beyond below that poverty line. In one nation... But the thing is, we don't see any dead people on the streets of China. We see no beggars and no naked people. Q: But you know, the assist... you know, in US, a long time ago, when I was working for... when I graduated, when I was working for a dental practice, there was a lady, was working as a dental assistant with me, and then... and she was working like 20 hours a week, not full time. And I asked her, why don't you work full time? She says, "If I work full time, I don't get the benefit of getting the Medicaid and then the other food stamps from the government. But if I work full time, then if I want to pay

for my medical insurance and then for other stuff, the income I make is not enough." K- America is a different story to the rest of the world. Your system is upside down. Your system is made to make people rich to make people really poor. American system is not a fair way of doing things but Europe we see the same. ??

(2:50) If the same man lives with his family and he has got \$250 a year. We're talking about not a month. And for the same air and the same life to live in Austria we pay \$40,000 - \$50,000. Then you see what man has put the value on it. This is what I keep on saying. How do you... I value a cleaner more than a doctor.

Because that doctor cannot practice if there wasn't a cleaner to clean his place, he'll get all his patients infected. When I used to run my business, I had a very direct line. At the end of the year, profit had to be shared, percentage of it, amongst all the people who worked. And the doorman, the security man, the secretary, and the management of the warehouses or whatever and the staff, all took the same amount. It was like 500, let's say, pounds. For the doorman was more or less one salary that time. He got double salary, he was very happy. He was very happy, but the manager, it was 10% of his wages and he wasn't happy. And always, every year I used to hear the rumors before Christmas, New Year, this thing going on. "Keshe is going to do the same silly thing again this year." And my doorman and the security people were always so polite, so happy. "Thank you very

much for this year bonus." And at the end it boiled down to, and I always used to tell them, I pulled them one day, because I used to go to the canteen to eat with them. And I stood up and I said, "I could hear these rumors, and the management wasn't happy, or the managerial people, why we get the same bonus as they do?" I said, "They ?? you a lot.

(2:52) You have no offices to manage, if these people don't clean it for you, and they don't open the door for you. They are the same value, that's why you get the same." We have to decide, we have decided that the cleaners should get a little, and a guy called a doctor can take 1 million, 2 million to do nothing, and kill so many people. And with the Keshe Technology this will change. We value ourselves, we value ourselves to what we want, what we need, what we can get. The, at the moment, this is the back knowledge to what I've been explaining for years, and I go against people like Bill Gates, they want to reduce population. The, when it comes in next 10, 20, 50 years, when with this technology it's going to come out, it has come out, we see it in so many ways, that you don't need to work, you get fed by the stations, you create your own energy, and there's no way they can tax it, and you work for it, for whatever it is. We'll open the Space and everybody goes to Space, nobody's going to pay wages to anybody who was in Space for one, ten, twenty years. Everything is provided by the system. Then the value of a doctor on board of a ship and the guy who cleans it, say maybe the doctor gets bored

and he does ?? start doing the cleaning because he does better job than a cleaner. And this is what social structure difference has come for the ego of some people. With this technology when we bring the energy, when we bring the water, we bring the food and your medication and everything else, all provided by one central system that you don't even see.

(2:54) You walk on the street, you absorb the energies you need to live. We never live hungry. I'm running a test in past year. In a way, if you've seen me in March of last year in Sanya, I've lost nearly 20-25 kilos in past 8 months. Specifically controlled and specifically managed, not as a diet, not to lose weight, but to understand the change of the structure which I'll bring in, how they'll affect people mentally, psychologically. I have to understand the work of the body of the man to be able to handle the body of the man. Losing 20-25 kilo in 8 months, 9 months has been no problem because I have understood the structure of the energy fields. I have to feel it. This is why we come on these planets, we come on manifestations to understand the pitfalls and how it is and then I don't need to eat two three days. I don't feel like eating. But I don't go through the game of, oh, I do this and that. No, I structured it from the plasma point of view, energy point of view. And the way I eat if you eat you might put 20 kilos on. But, understanding the fields of it. This is why I know how a hungry man feels. How, what it needs.

(2:56) What can you satisfy it with? I can give you a glass of water. You don't need to eat for three, four days, maybe a week. Some of the Knowledge Seekers in some sessions of the Fridays don't eat for days and weeks, they lost appetite for a lot of things. Because now they see the energy coming into your body. They see the, this is one of the reasons I said three, four weeks ago, I was so sick I never had such condition, was because going through this, I felt the energy coming to me. The doctors test me for every kind of virus, flu, influenza, Covid, blah, blah, is all negative, because it's an energy pack in a protein level. But I stood, I learned, I understand, what is the next to do? We do not need to eat, and we have become slave to eating, and they have used that to slave us. I do anything to have a shelter, I do anything to have a heating, I do anything to have food, and if I cannot get it, I get a tent, I get a cardboard box, and I look around for the food in the market, somebody's left over, whatever. Where I can provide you heat, and food, and water through literally a structure of a headphone. This is what we've done with you, this is what the trials are. If I play music on the streets while you're passing and in a way the microphones which in the same background silence may feed you, while you're listening to the music you receive all the energy you need. Do you need the supermarkets? Do you need two people to control your food?

(2:58) Do you need energy? You will see very soon we market the what we call, we promised you the Gas

Unit and whatever is going to be marketed very, very soon in a very different way. When you fit this system into the cooker in the oven in your house and you don't need to buy gas anymore. You don't need the supply of energy, you don't need water anymore. So what's going to happen? All these wars all these British petroleum wars for fuel and energy is gone, it's obsolete. The oil industry, energy industry the way it's grown in past 50 years, in 2025 is going to hit the rock. There are going to be huge things to do with KF. But that's nothing because we do the same thing now in the Wellness, we do the same thing in agriculture, we do the same thing in food. And once we become not the slave to it, then we open the Space. I do nothing here. I better go and see what's happening in Space. It costs me nothing, because everything is provided for us. We made prisons and we provided people to create more criminality. Now we bring the spaceships to give the open spaces people to prison themselves in them to see more not to be criminals. Instead of staying around here doing nothing and whatever suffering, in the Space everything is in a spaceship, your food, your medicine is just as fields absorbed by your body. You're a passenger pleasure. And it's not the theory anymore. .. We told you about the Gas Unit, Gas Energy Units...

(3:00) << Italian translator interrupt the teaching by mistake. >> K- This is what is on the way. This is what it is. Now, I was, let me explain to you something very interesting. Um, let me, if I get hold of it, I show you,

then you understand as Knowledge Seekers. You've been with me like a rock and you stood by us like everything else, good and bad you've been there. You lost money with us when we trusted people, you helped us when we stood there. Let me go and show you something which you as Knowledge Seekers will understand what this means. (It will take me a few minutes), but just be patient because it's your achievement more than us. It's what we as Knowledge Seekers and you as stood there supporting us with everything else. Let me show you something very, very interesting. Just bear with me I have to find what I'm looking for and as usual I'm a slow coach. << Mr. Keshe tries to find the image of the Gas Unit. >>

(3:02) .. We showed in Linz a few years ago a huge box that was a gas unit. ... No not this one ... K- ... I want to show you, to understand, you Knowledge Seekers keep on beating and ask Mr. Keshe what happened to this, what happened to that, why is it not there. I'm trying to find it if I find it and I can tell you when we tell you the changes to come understand it.

(3:04) A little bit longer just be patient it's Keshe Foundation teaching nothing is ever planned. << Mr. Keshe keeps trying to find the image of the Gas Unit. >> K- ... Anyway, I try to find it while I am speaking to you. But this system you can imagine a freezer size, a chest freezer size system which we showed for production of Gans and you lot kept on battering us that, Mr. Keshe you said you give us the Energy and

Gas Production Unit and everything else. I have to find it... << Mr. Keshe find the image of the Gas Unit. >> K- ...

(3:06) Now you understand what it is in technological development. And then it's only Keshe Foundation who's involved and we're doing it. So you will understand exactly what I mean. These are the... Do you remember this? You've seen the size of it? Now this is what has become, one of these black boxes. Development in technology. And this suitcase is what's going to hit you in the market. Even maybe smaller than this, but in much better it's a packaging, if it look fancy. It's not that we sat down doing nothing. Technology development takes time, two years. And what you see here, it's shown Chinese leadership, military and the rest and the government. The manure has 'hit the fan' for the energy people has it? Would you like this in your house?

(3:08) Would you like this in your house? And it's not one, it's three of them. And this is where, when you supply, what are you going to do with it? Miniaturize it or use it the same? This is literally when we finish with this, maybe we have a couple of months to complete it, there'll be that Oasis system which Rick was showing. Gas, energy and the water from the same box. When you have enough energy and you can connect it, give you enough energy to eat or whatever, who do you like to be that Austrian guy not going to work? Why should I? Everything is given to me. Can we add in the mixture of the water and the gas, which

you think you are breathing or you are burning with, a mixture that gives you moral satisfaction? You can see the change, what is about to come. As I said, we have placed it in locations that if anything happened to me, get it released, the World of Energy, all these Rothschild family, are all up the smoke. Now you understand the power of the technology and what is about to hit us with.

(3:10) And if you look, he's sending me pictures and pictures again. Let me just take a picture from what he just sent. Thank you very much, Dean. This is from the photos that Dean as a photographer of the Keshe Foundation has taken over years. If you look at this new picture, if you look at this new picture, where are you? You saw the other three pictures, the other two pictures. Now if I add this picture to the set, what you see here, if I open it, you see the Gas Unit, the CO₂ Unit and Energy Unit. This is a refrigerator, next to it and the lights if you remember. Now this is what it was on the Gans and the other one. This is the Communication Unit of the same thing. But what you saw what's in this box is what you see here. All in one box. You tell me why we produce CO₂ and we showed, if you remember, that up here is a CO₂ gauge detector.

(3:12) Why did we show? Why do you... what has this got to do with this? Do you remember how water is created. Combination of those three technologies in one of these suitcases gives you the water, the energy and gas. Which the gas is not for burning, gas

is for mixture of different ?? to gives you as a plasma energy for your food and medicine. This is a truly God created system. But man doesn't understand, as the guy, one of the top guys in the government told us, "Just show us it burns for seven days, that's all we're interested in." Your ignorance is your bliss. And then if you understand how the system in this works, and I put this into it, you decide you want an apple, the system produces the energy of the apple through the gas, through the water you drink it. We are true scientists and understand the work. You keep on shouting at Mr. Keshe, "What happened to the gas energy system?" It is there in front of you. And, even I say to you something very simple, as all of you, you are. Some of you are, whatever, I show it to you, in a very simple way.

(3:14) Just be there in a second and I'll show you in a second what it means. I can burn it for you. One flame, one can feed. I don't need to change the second one into flame. I can leave it as a plasma and feed you with it. Now you tell me should that guy be working? Any other question? Q: Thank you Mr. Keshe. Mr. Keshe my next question is about, when you look at the CO₂, any gas, CO₂ gas, Carbon monoxide gas, any gas, If you fill it out in a container, if you put it in a room, it takes the whole room. It just goes, expands to the size of the container you put it in. But if you put water in the container, they also take the shape of the container. But, when you put a Plasma in a room, the Plasma holds its position,

doesn't go all over the room... K- Yes, it does. It does. Q: No, it doesn't. K- It does. Q: It doesn't fill the whole room. K- Actually, it goes through the walls can't even hold it. You don't know what to do with it, because you don't see it.

(3:16) Q: Mr. Keshe, but you know, but it... K- You're wrong. Q: I'm... so... Okay, so if I'm a plasma, yeah? I'm a plasma... K- You're not a plasma, you're a box of plasma. Q: I'm a box of plasma, and you're plasma. We hold a position, we don't go on top of each other. K- Yeah, that's your wish, but it's the reality, that... You look at your physical box, I look at the fields which you create that I can detect beyond walls. Have you ever seen military systems? That they monitor, used to be heat, now they monitor ultra-violets? It doesn't matter if you are in a building or not, where you're hiding, they can find you. You talk about your physical condition, but we talk about the energy that physical condition creates. You call it Aura, you're so big believers in Auras. You just monitor the Auras which is visible to you, what about the rest of it which goes throughout the Universe? Q: Mr. Keshe, I understand. You see, this is... K- So, your plasma doesn't take... Q: No, no, you know what... K- Plasma is a field, it's not an entity. Q: This is... I'm talking, my explain... Okay. So, this is what I feel. I mean, maybe I'm wrong. So for example, I know now that since I'm in this body, I think I'm limited. But now my experience tells me, like, I am the one is inside. The real one is everywhere. Because sometimes, you know, the

reason I am in the room... K- Let me, let me, let me explain. You've been going... No, no, no. You've been going around this for a long time in different things. Let me explain to you one thing. One thing, very clear. You have to realize, you have physical body and energy system,

(3:18) which controls our physical body, and then you have an energy system, which has nothing to do with your physical body, it's trapped in it. But because it's trapped in it, it uses it to reach its own end, yeah? Which is your Soul. What you talk with the Aura, and the energy, and whatever your physical body, you're talking about the matter state, or what we call visible state, tangible state, where in fact there is another control system which is not connected with this package, but it has access to it. And this is what you're trapped with. If you can, if you understand what you have given to you, you can feed the Soul to feed the Man, you don't have that problem. It's your problem, that you cannot separate, that you have two parts into your life. One is the physical and one is the energy. You look at the energy that I eat food, no, we look at the energy as a Universal energy, we call the STM. And with the new knowledge even the people who come in with the headphones, it's so simple that we can interact with it. We don't need complicated system from anywhere in the world. How many of you are on the line on tests on Fridays? All corners of this planet with the headphones which is connected to your mobile. The minute we establish

the line with the headphone your phone is useless. We use your physical and STP to connect to your Soul then your Soul is connected to our system, we don't need it. Q: Mr. Keshe okay I understand this one thing I need from you is this I need the keyword to say this how can I control this damn thing because... (3:20) K- Emotion, emotion. Q: Okay so how? K- How it's for you to understand which part of your emotion is tainted, and which part of it is not? Q: What do you mean, what do you mean tainted? K- Our emotion is tainted with everything, with hunger, with need, with want, with jealousy. You, you know, everybody thinks they're righteousness and they're correct and they've done everything, but you cannot fool the master which runs in there, I can see what you're doing it. Q: Okay Mr. Keshe I have one question, okay so is there, is for example, if you are emotional you get very sad or get grief, like some imagine like, if your parents is going to die, is that also emotion that I have to, is called tainted? K- Yes, because it's emotion of belonging. It is, everything is connected to each other in a way. You understand? So, we are... we connect ourselves through those emotions with what it be. I lost my parents, I lost my brother within structure of time. I never had the chance to go to their funeral. To me I didn't need to be there. Because to me is everlasting life. You don't need to create the emotion with the viscosity of the condition. Q: So how is the love and compassion works?

(3:22) So for example, if somebody dies, you're supposed to be happy so when they say to you... K- It depends what, it depends what brain mindset they have brought you up in. R: If you're Irish you'd be happy. They have a wake, they put the body out on a table, everybody makes jokes and they have fun, and get drunk. K- Yeah, because it's the same as what we call in the, in the English language, the last bell. They put a lot of people on the table and then they, after a few days of drinking, they put them in the grave and then later on when they take the grave up, they see they're grown up, they scratch the grave, the what you call it, the coffin. So they put a, what you call it, a line to the finger of the dead and connected to the top of the cross on the top that if he wakes up he rings the bell, now you have to dig him out. That's what the last bell came from. ?? Q: I have another question. For example, I've seen you sometimes in the teaching even, and also in privately, I saw you, sometimes you cry. So, for some reason, like something, like either for humanity or some other reason. So when you cry, what is that cry for? What is that emotion? K- That's the emotion of the physicality. This is the same as I told you, we test the hunger. To be able to find a solution, you have to test it. And I always have been my own test parameter. Q: So you were testing yourself? K- Of course, you test yourself in emotion. It's there to understand where your pitfall is. You, I don't know if you watched in past few days with the tsunami in Japan, the rest of the nation is oblivious to

what happens to some people. Lives changes. To us, it's a minute of movie watching, a ship turning, a guy in the car disappearing in the ocean, the rest of it.

(3:24) But what happened to the child, the woman, the business he lives behind, he feeds most probably so many people. You feel that pain, not a pain of loss. And you, why do you need to live in a condition that there is such a thing? Earth is a harsh world, this planet is so harsh, its condition, its lifestyle, even the... what it supports, what it provides. The tsunamis, the hurricanes, the fires. Why can't the planet be happy? Why can't the planet should be abusing its citizens this way? But isn't it because of it that we have all the beauty of the seasons and the summer and the winter and we break our leg in the snow and we drown ourselves in the somewhere in the oceans. But which one is the pleasure? It's not going to be, in the Space is going to be hunky-dory, in the Space it's going to be everything fine. It has its own challenges. But life on this planet is beyond imagination harsh. Why? What's the need of suffering? Why does the Man has to suffer? Thank you very much. Shall we bring it to an end? We've been here for about three hours. R: Yes, nearly three and a half. Thank you Mr. Keshe.

(3:26) We covered pretty much all the questions and there's anything left over, folks can bring them in next week. K- Thank you very much. Please don't forget Keshe Foundation needs a lot of support, as donations or whatever. We have structured ourselves to be independent and not to be caught by this. We

need a lot of support and if you can support us in any shape or form, don't forget the Foundation needs to run its operation. Thank you very much and see you next time.
